

I strongly urge the FCC to reject NAB's petition 04-160 which seeks to restrict localized broadcasts on satellite radio. I live in an area of the country (Utah) with both mountains and deserts. AM or FM broadcast signals are simply not available in many areas. Many of us in the mountain west rely on satellite radio in both our boats and autos to provide radio coverage where other signals are not available. In addition to providing entertainment, localized traffic and weather reports over satellite radio would provide additional safety and convenience. I would like to have more not less localized coverage. Please allow Sirius and XM radio to continue and expand their localized broadcasts of news, traffic and weather.
